

```

class UserComponent extends Component {
  state = {
    name: 'George',
    age: 26
  }

  setName(n) {
    this.setState({
      name: n
    })
  }

  setAge(a) {
    this.setState({
      age: a
    })
  }
}

```

Hook → ~~useXXX()~~

```

function UserComponent() {
  let [name, setName] = useState("George");
  let [age, setAge] = useState(26);
}

```

~~age = 100~~
